A sunset scene with a bright sun low on the horizon, casting a warm orange glow over a vast expanse of dark, textured clouds. The sky transitions from a deep orange near the horizon to a dark, almost black color at the top.

Cervicalgias y Cervicobraquialgias

Plexo Cervical

- *El plexo cervical tiene dos tipos de ramos, los superficiales que serán sensitivos, y los profundos que serán motores largos, que están organizados de la siguiente forma:*
- *Superficiales*
 - *Occipital menor: Se origina en C2, e inerva la piel de la parte posterior del cuero cabelludo.²*
 - *Auricular mayor: Se origina de C2 y C3, inerva la piel que va del ángulo de la mandíbula a la apófisis mastoides, la glándula parótida y la piel que la cubre, y la cara posterior del pabellón auricular.*
 - *Cervical transverso: Se origina de C2 y C3, inerva la piel del triángulo anterior del cuello.*
 - *Supraclavicular: Se origina de C3 y C4, inervan la piel del hombro.*
- *Profundos*
 - *Asa cervical: Se origina por ramos de C1, C2 y C3, inerva los músculos infrahioideos del triángulo anterior del cuello.*
 - *Frénico: Se origina principalmente de C4 pero tiene ramos de C3 y C5, da la totalidad de la inervación motora del diafragma y la sensibilidad de su porción central.¹*
